

Lab - Gathering Windows System Information Using Live-Forensicator

Overview

Live-Forensicator is a PowerShell script that will aid Forensic Investigators and Incidence responders in carrying out a quick live forensic investigation. It achieves this by gathering different system information for further review for anomalous behavior or unexpected data entry. Forensicator looks for unusual files or activities and points them out to the investigator. Forensicator has no inbuilt intelligence, and it's left up to the investigator to analyze the output and reach a conclusion or decide on carrying out a deeper investigation.

Lab Requirements

- One Windows target machine running as a PC or Server, stand-alone or DC.
- Download of Forensicator

Being the lab

Download the Forensicator PowerShell script.

<https://github.com/Johnng007/Live-Forensicator>

2x click the contents of the zip folder and extract the zip file's contents.

You can choose to extract the contents to the exact location as the zip file.

Open the extracted file.

From within the extracted folder contents, find the `Forensicator.ps1` script. Highlight the name of the script. Next, press the shift key and from the context menu, select, **Run with PowerShell**.

Accept the security warning.

At the PowerShell prompt, invoke the running of scripts using the following command.

```
Set-ExecutionPolicy RemoteSigned
```

```
PS C:\Users\Expat\Downloads\Live-Forensicator-main\Live-Forensicator-main> Set-ExecutionPolicy RemoteSigned
Execution Policy Change
The execution policy helps protect you from scripts that you do not trust. Changing the execution policy might expose
you to the security risks described in the about_Execution_Policies help topic at
https://go.microsoft.com/fwlink/?LinkID=135170. Do you want to change the execution policy?
[Y] Yes [A] Yes to All [N] No [L] No to All [S] Suspend [?] Help (default is "N"): A
```

Say Yes to all by typing in the letter A.

When the script launches, answer the five questions one at a time.

```
Enter Investigator Name: Prof. K
Enter Case Reference: 0001
Enter Investigation Title: Demonstration
Enter examination location: Philippines
Enter description of device e.g. "Asus Laptop": Instructors PC
```

Once the script completes, it will close. Return the extracted folder location and find the extracted risks information inside a folder with the machine's name.

You can open each HTML document to examine the extracted information.

End of the lab!
